

DNANET™
forensic tagging systems

a new approach
to deterring crime

mark. trace. convict.

DNAet™ helps to expand and strengthen any security effort by providing a means of directly linking criminals to crimes. In the event of a crime, the offender is tagged with an indelible, fluorescing DNA-marked substance.

As a crime is investigated, the fluorescing DNA mark can assist police in linking the offender and stolen items to a specific crime scene, creating a greater ability to identify and convict.

DNANET
forensic tagging systems

intruder spray and fog systems

- banks/ATMs
- pharmacies
- jewelry stores
- convenience stores
- pawn brokers
- gun shops
- warehouses

tactical marking systems

Whether you're marking bait evidence to be used in a sting operation or currency for a ransom exchange, the key to success in linking evidence to a crime is using an evidence marker that's flexible, durable, detectable and forensic.
